PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER:	0201	SESSION NUMBER:	01
DATE OF SESSION:	16 MAR 90	DATE OF REPORT:	16 MAR 90
START:	1000	END:	1025
METHODOLOGY:	CRV	VIEWER IDENTIFIER:	052

1. (S/NF/SK) MISSION: To describe the waterfall at encrypted coordinates 37 45' 27"N/119 35' 44"W.
2. (S/NF/SK) VIEWER TASKING: Utilizing encrypted coordinates 37 45' 27"N/119 35' 44"W describe the target.
3. (S/NF/SK) COMMENTS: No inclemencies noted. ^{*} A summary of information is attached to this report.
4. (S/NF/SK) EVALUATION: 3

*no summary is attached -
none needed.*

MONITOR: 025

Yosemite

COURSED TO FORTH in its wild leaps, Yosemite Fall plunges with such force that the ground trembles at its base. Upper Fall, Middle Cascade, and Lower Fall plummet a combined 1,430 feet, with Amer- ican Indian tradition attributing its prime to the fall of the Yosemite Valley with its thunderous roar. In early summer the warring waters whip in the wind like a gossamer veil. By mid-August only a tear trickles down the canyon face.

Pressed between sheer rock walls half a mile high, Yosemite Valley follows a seven-mile gorge carved by glaciers and the Merced River. From hanging valleys high above the river spill many other spectacular falls, including Bridalveil, Vernal, Illilouette, Nevada, and Ribbon, which drops 1,612 feet, longest single fall on the continent.

Yosemite became a national park in 1890, a few days after nearby Sequoia attained park status.

Yosemite firefall rains a river of embers down the face of Glacier Point. Each summer evening a bonfire of bark from fallen trees blazes atop the cliff. During it leaves

CPYRGHT

embers. As twilight deepens into night, an expectant hush envelops campers in the valley more than half a mile below. Suddenly the cry sounds in the darkness, "Let the fire fall!" and men with long-handled rakes push the coals over the brink. As if in slow motion, the fiery torrent drifts toward the canyon floor, consuming itself as it falls.
